Urban-Act/Cities Climate Finance Leadership Alliance (CCFLA) National and Subnational Assessment tools of Enabling Framework Conditions for Subnational Climate Finance

Enabling framework conditions (EFCs) are essential for scaling subnational climate finance because they provide regulatory clarity, strengthen institutional capacity, mitigate investment risks, promote stakeholder engagement, and improve access to finance to support long-term sustainability. By creating a conducive environment for climate finance, EFCs help unlock the potential of national and subnational entities to drive climate action and achieve global climate goals. The Urban-Act/CCFLA National Assessment tool is intended to enable better access to climate finance for subnational governments by assessing the national EFCs. The National Assessment tool can be used to facilitate recommendations and is designed to be primarily completed by national government officials. The Urban-Act/CCFLA Subnational Assessment Tool is intended to enable better access to climate finance for subnational governments by assessing subnational EFCs. The tool is designed to be primarily completed by subnational government officials. Both tools introduce a standardized approach to evaluate four elements of EFCs: climate policy, budget and finance, climate data, and vertical and horizontal coordination. The Subnational Assessment Tool should be used in combination with the National Assessment Tool, which provides a comprehensive assessment of the EFCs for subnational climate finance in the assessment country. The tools together help assess EFCs and can be used to identify areas for improvement.
